

How to run

- **Pre-Requirements:**
 - Python
 - Django (pip install Django)
 - MS-SQL Django Driver (pip install mssql-django)
- **STEP 1:** Extract the 'database_web' folder into the working directory.
- **STEP 2:** Check for the connection between MS-SQL and Django. By default, connection should be correct in database_web/settings.py file. But check for other requirements. (<https://learn.microsoft.com/en-us/samples/azure-samples/mssql-django-samples/mssql-django-samples/>)

```
DATABASES = {  
    'default': {  
        'ENGINE': 'mssql',  
        'NAME': 'UPS_PRODUCT',  
    }  
}
```

- **STEP 3:** Run 'python manage.py migrate' command in 'database_web' folder.
- **STEP 4:** Go into the folder and run the 'python manage.py runserver' command.
- **STEP 5:** go /web for index page.
